

Motion and Automation

TechHome, established in 2005 and formally a division of Hetech, an electronics design and manufacture company in Brisbane Australia, provides remote control products and wireless automation solutions to a broad range of businesses and industries.

TechHome offers a wide range of various types of actuators, combined with it's locally designed supported motor controllers. It also supplies sensors, power supplies and other products to complete it's offering in the 'Motion and Automation' appliances.

WHY TECHHOME

- Australian owned and run
- Close to 20 years of operation and experience
- One-stop shop solution
- Controllers, remotes, rain sensors, actuators
- Support of Hetech, electronics design and manufacturing
- Trusted partner
- Tailored product solutions available
- Support of Hetech, electronics design and manufacturing

KEY CUSTOMERS & PARTNERSHIPS

PRODUCTS

- Linear Actuators
- Remote Motor Controllers
- Lighting Kits
- Power Points
- TV and Column Lifts
- Opening roof kits
- Remote Outdoor Power Solutions
- Automation App - The Hub
- Accessories

INDUSTRIES & SERVICES

ARCHITECTURE // AGRICULTURE // LANDSCAPING
OPENING ROOFS // SPORTS EQUIPMENT // OPENING
WINDOWS // TRAFFICE MANAGEMENT SYSTEMS // TV LIFTS

CUSTOMER SPOTLIGHT

Requirement

R&DG Sanday came to Techome with the idea to create a ventilation system for chicken sheds that would improve the overall health and happiness of farmed chickens and, could also be retrofitted. The idea was to create ventilation shutters for chicken sheds across Australia that let in more sunlight and improve airflow. These shutters were to go down the side of the shed and ensure proper ventilation throughout the day and night.

Work Performed

Techome designed and manufactured a unique controller to fit this requirement and had actuators specifically designed to suit this purpose. A row of Techome actuators were linked to the shutters that are then triggered by time or weather to open/close as needed, providing the chickens with a healthier and happier environment. Outside of this, Techome also supply all of the actuators required for the chicken shed.

Testimonial

"I have had a long working relationship with Techome and have enjoyed the process of developing a functional, easy to use ventilation system for chicken sheds around Australia. The customer service has always been great, with long-standing staff who know what they're doing and quick turnaround times." - Steve Sanday, R&DG Sanday.

Requirement

Opening Roof Specialists approached TechHome with a requirement to design a fit for purpose controller to open and close their Louvre Roof System. The controller was to be sold in conjunction with their Louvre Roof Systems to provide a easy to use lifestyle roofing system for customers.

Work Performed

TechHome provided Opening Roof Specialists with their turnkey service, designing a custom controller to suit the requirements for their Louvre Roof Systems and, manufacturing the product for them in our local manufacturing facility. The controllers include a state-of-the-art rain sensor that closes the louvres at the onset of rain and can be programmed to stay shut or reopen after rain.

TechHome and Opening Roof Specialists have now worked together for several years, innovating and adapting controllers to suit new product.

Testimonial

"TechHome has provided our team with excellent customer support over the years, their turnkey service making the product development process easy."
